**WALLET**

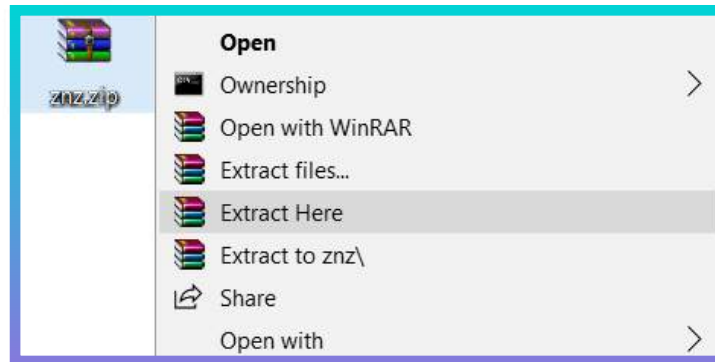

**SETUP GUIDE**

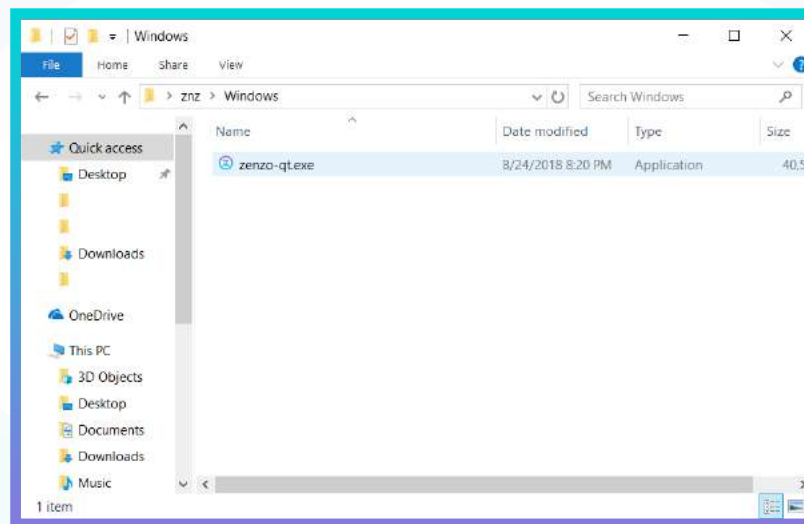

WINDOWS OPERATING SYSTEM

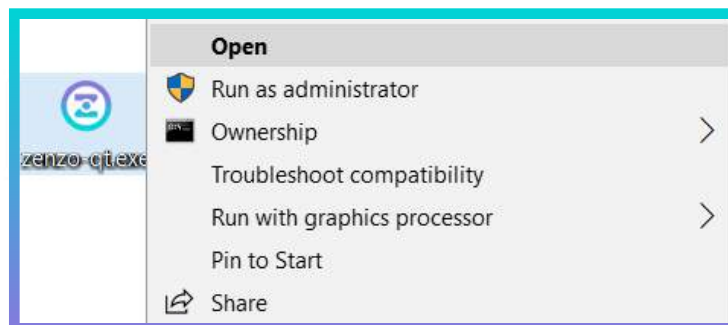

▶ Download the Windows ZENZO (ZNZ) Wallet from the Official ZENZO Github or Zenzo.io.

▶ Once you have downloaded the file, extract it and click the Windows folder to find the filename "zenzo-qt.exe".

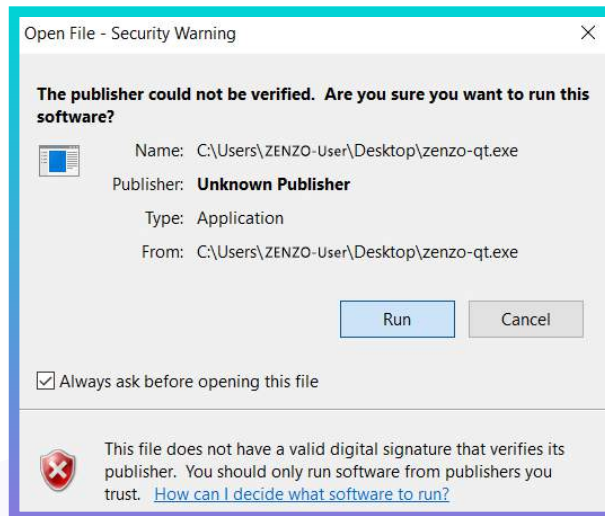

▶ Double click or right click "open" (do not "Run as administrator").

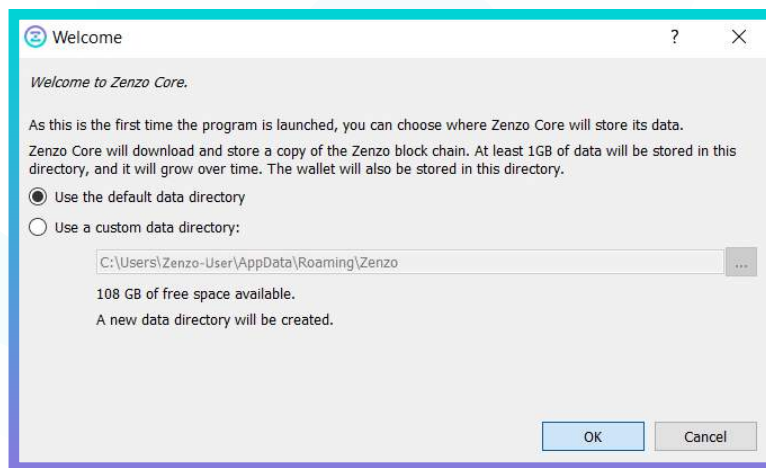

▶ When the Open File-Security Warning Box pops up, click "Run".

\*If this box pops up whenever you open your wallet in the future, click "Run" everytime.

\*If the Windows Defender Box pops up, make sure that you click "Allow Access" because this is P2P network and a requirement for the wallet to operate.

▶ Next, you can click "Use the default data directory"(default) or you can change and specify where you want to create this data directory. If you're not sure, go with the default option and click "OK".

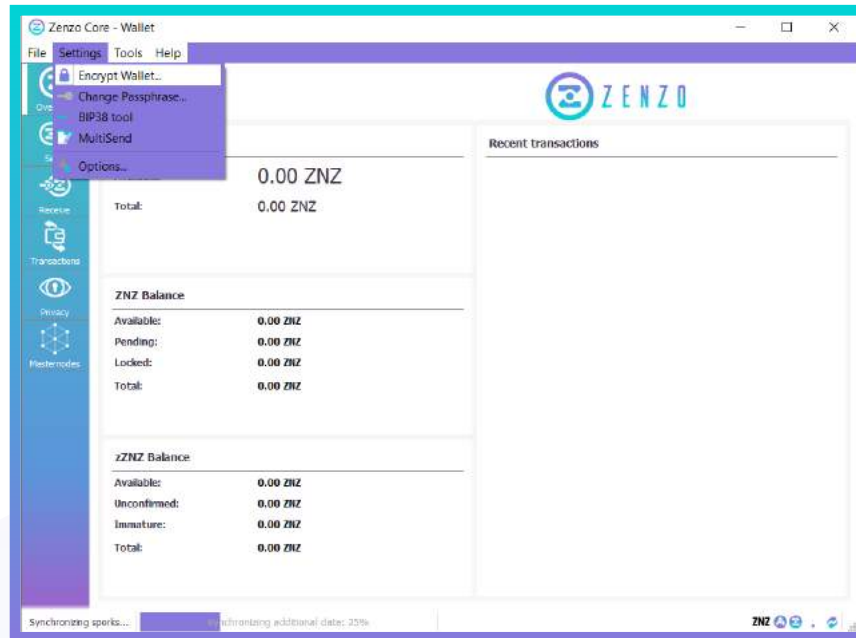

After that, the splash screen will load and then your wallet will open and start to synchronize.

▶ Now go to "Settings" and click "Encrypt Wallet", then type in your password.

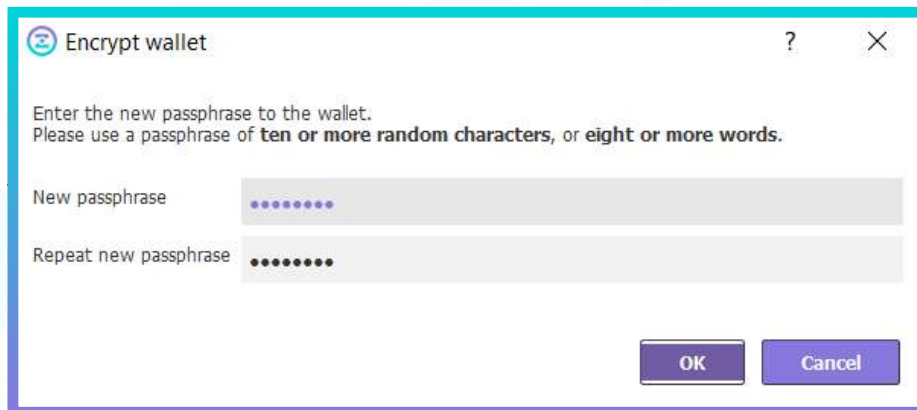

\*It is recommended to make your password as secure as possible by adding a combination of capital and lowercase letters, symbols, and numbers.

\*Make sure to save this password somewhere safe and it is recommended to have a physical, written copy that is not on your computer or device.

\*If you manage to forget or lose your password to your ZENZO/ZNZ Wallet, ZENZO is neither responsible nor can administrative actions be made to recover your password. ZENZO has no power or access to your password(s) at any given time. It is safely encrypted to where only the creator has access.

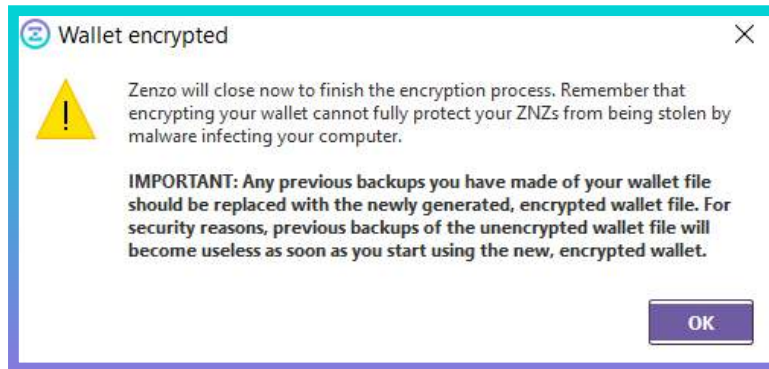

▶ After you have typed in the password, click "OK".

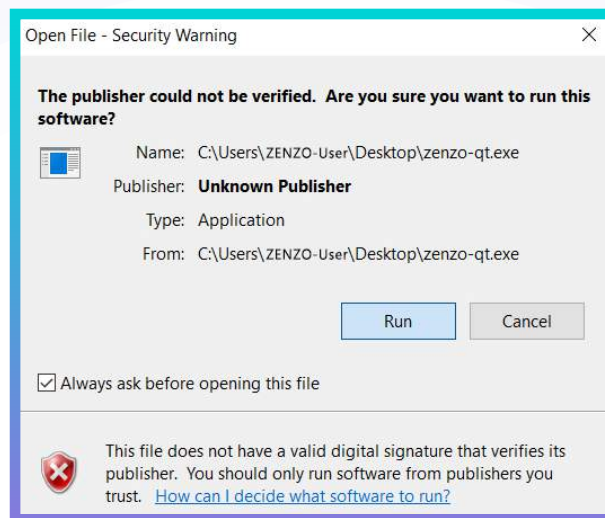

▶ A confirmation/warning box will appear, just click "Yes".

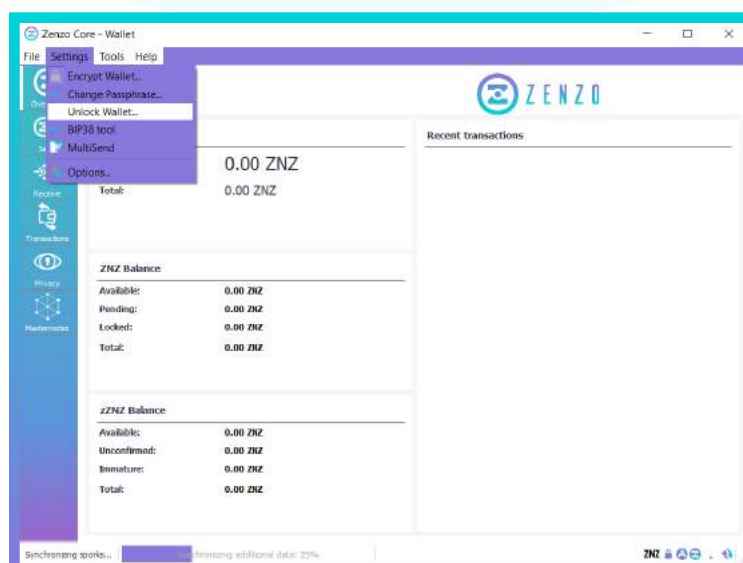

▶ One more confirmation/warning box will appear, just click "OK".

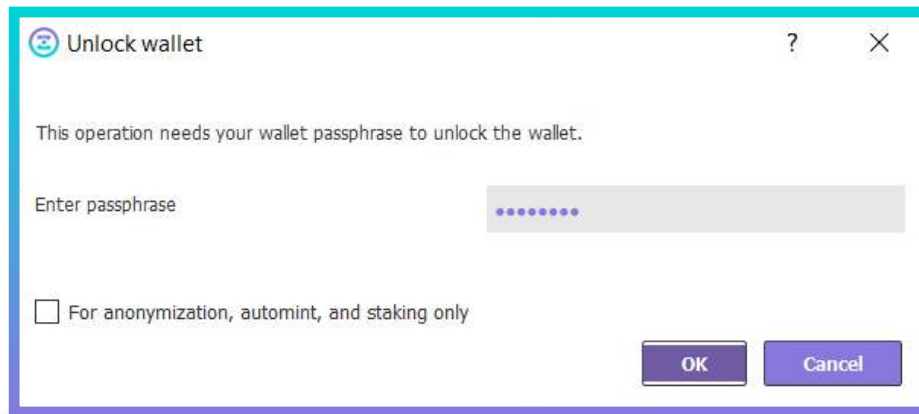

The wallet will automatically close to save the new settings (encrypting your wallet with a new password). Now you can reopen the wallet and when the Open File-Security Warning Box pops up, you can click "Run" again.

➤ Once your wallet has opened back up, go back to the "Settings" menu bar to click "Unlock Wallet".

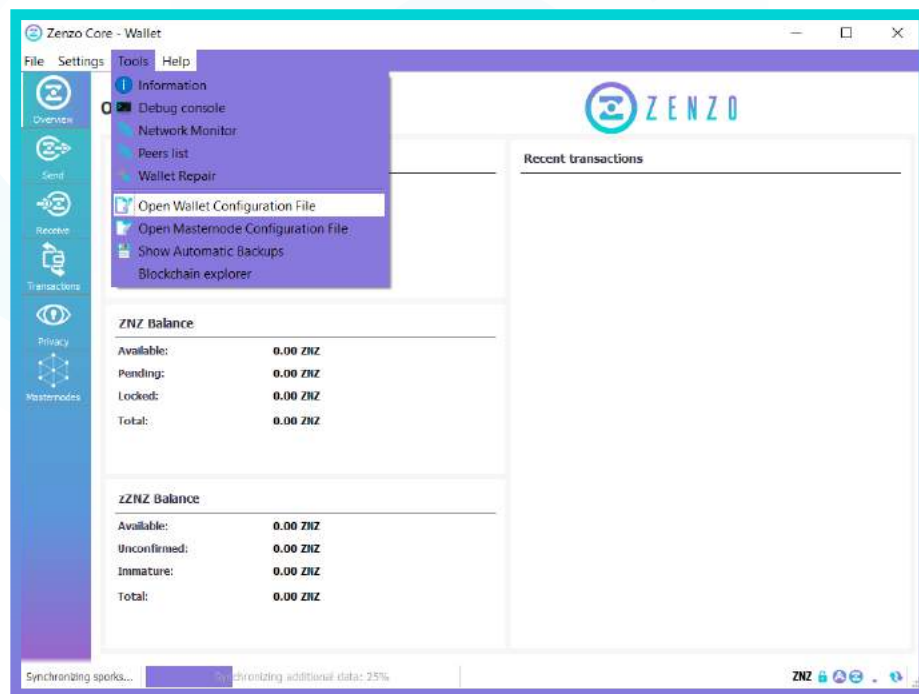

- ▶ Now type in your new password and click "OK". (For staking only, click the box that says "For anonymization, automint, and staking only and then hit "OK").

Now, continue to let your wallet synchronize with the network.

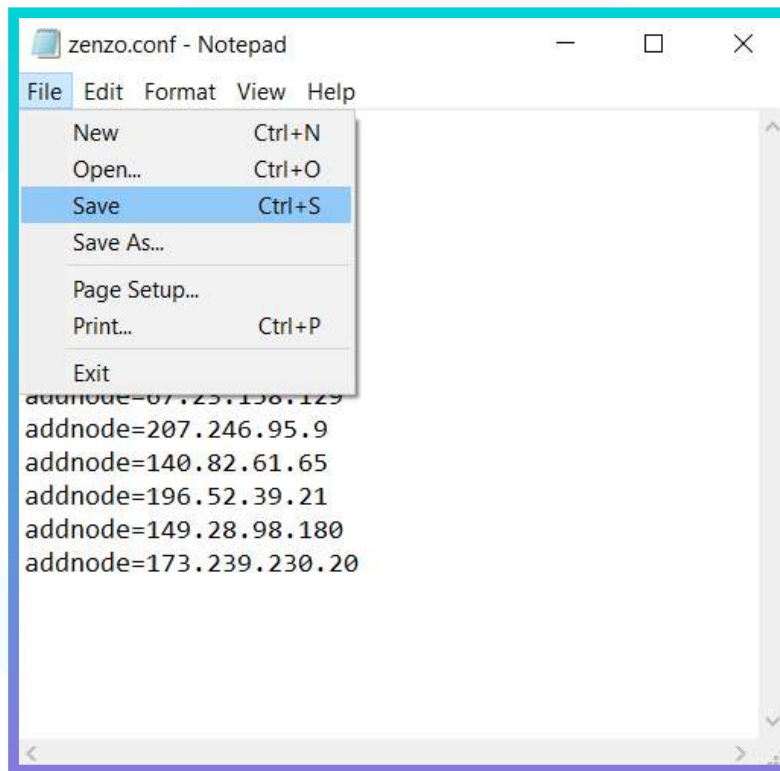

- ▶ What you can do to make your wallet's connection more stable and help it to synchronize faster is go to the "Tools" menu bar and click "Open Wallet Configuration File".

- ▶ Copy and paste this text below and then click "File" and "Save", You can close the editor(notepad).

Text is on the following page...

```
rpcuser=(create-your-username)
rpcpassword=(create-your-password)
staking=1
enablezeromint=0
addnode=80.211.138.180:26210
addnode=45.76.42.236:26210
addnode=45.76.184.133:26210
addnode=95.179.200.83:26210
addnode=45.76.117.67:26210
addnode=80.240.31.194:26210
addnode=45.77.4.175:26210
```

Your file should look similar to the file above.

\*This may not apply to you, but if the wallet seems to get stuck synchronizing, you can close the wallet and reopen it. (It is preferred to do this and quite often can solve the problems you are having, it is like rebooting your computer).

So, now you will close the wallet, reopen it, click "Unlock Wallet" and type in your password, just like before.

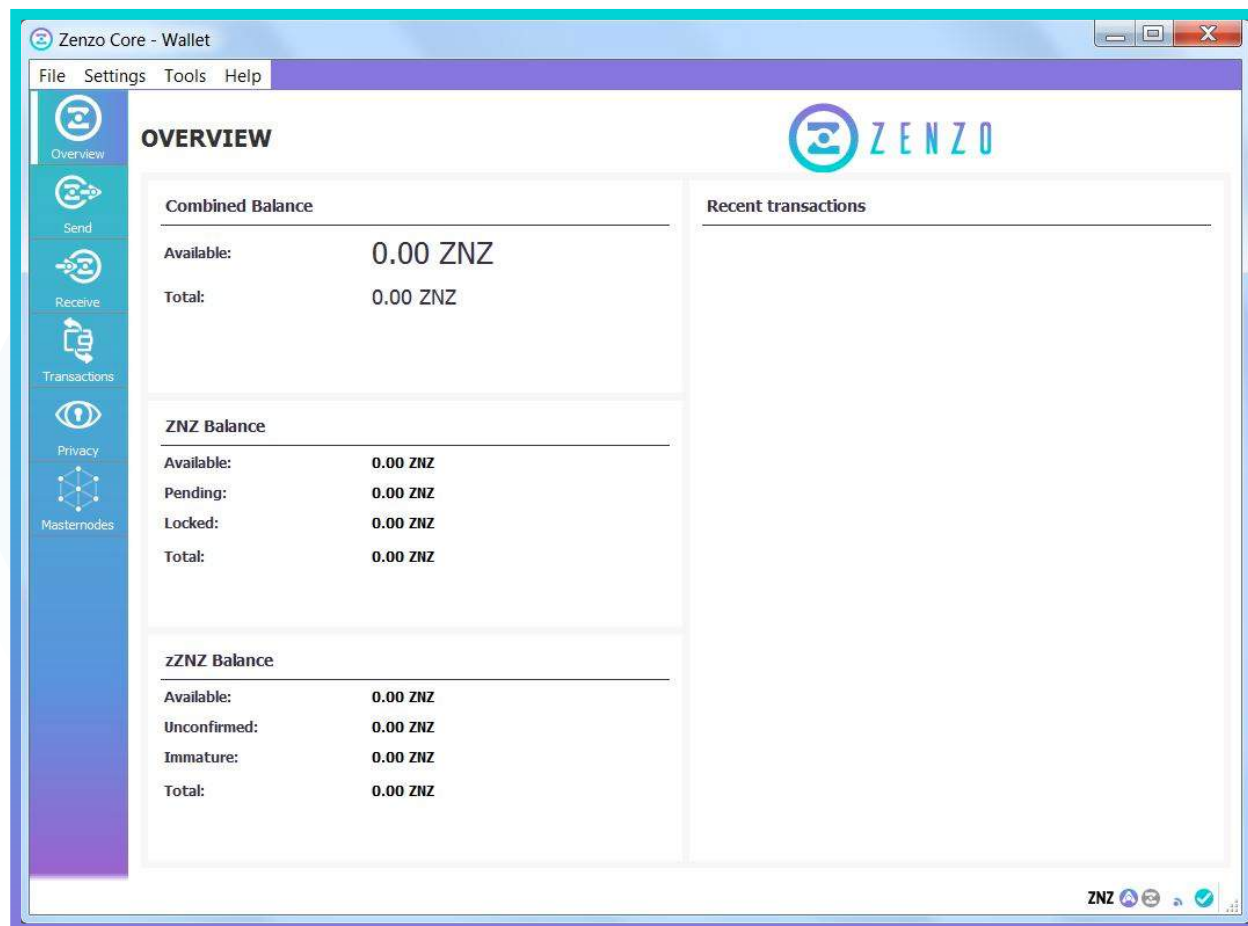

\*It is recommended to click the box that says "For anonymization, automint, and staking only" and then hit "OK".

For anonymization, automint, and staking only

Let it fully synchronize to the network. Your ZENZO-ZNZ Wallet is now officially setup and ready to use!

# CONGRATULATIONS

Here is an example of what your wallet will look like after it is fully synchronized.

For any help or questions you have, you can join the Official ZENZO Discord Server:

<https://discord.gg/u8AQ4KQ>

Be sure to join the channel #wallet-help for questions related to the wallet and the team or community will be happy to assist you.

Lastly, welcome to the ZENZO Community!
